Move all TV shows and/or movies from one folder to another - Rename all files and subfolders - Exclude certain subdirectories and/or folders - Be smart and have fun. TUTORIAL - Adding or removing a single directory - Adding or removing all files of a directory or subdirectory - Add, remove or rearrange files and folders of a directory or subdirectory As long as you have Java installed on your computer, you don't need to set up anything else. This means that you can drop the.exe file anywhere on the disk or a USB flash drive to directly launch it on any PC with Java. It doesn't modify Windows registry settings. The user-friendly interface is based on a common window which lets you add as many video files as you want via drag-and-drop. It shows the full path of the

time. Before instructing the tool to move the files to a new directory on the disk or to keep them where they are, you can customize the naming rules by specifying a season prefix and rename format by mixing and matching the available tokens, such as show name, season or episode number (with or without leading zeros). Moreover, you can modify the proxy host name, port and user authentication data, as well as disable the program from auto-checking for updates at startup. The renaming and optional file transfer are triggered with the click of a button. Evaluation and conclusion: It was light on system resources consumption in our tests and didn't hang, crash or prompt error messages. Thanks to its intuitive UI and options, TVRenamer can be easily

used by anyone who wants to re-organize their TV series collections by renaming the files. However, it didn't work with the latest Java edition in our evaluation. TVRenamer features: Highly simple user interface, with only a few buttons. Light on system resources consumption. Intuitively provides you with all settings for renaming files. Limitations: TVRenamer can only rename.mp4 files. It can't rename the.xz files. Doesn't work with the latest versions of Java. For more info: [b7e8fdf5c8](#)
